

BALAGARH BIJOY KRISHNA MAHAVIDYALAYA

Department of Mathematics

Syllabus and Course Module for odd semester 2022-23

1st. SEMESTER (HONOURS)

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO OF CLASSES	Curriculum Delivery
BMH1CC01	Calculus, Geometry & Differential Equations	<p>Unit -1: Hyperbolic functions, higher order derivatives, Leibnitz rule and its applications to problems of type $\sin ax b e^{x+}$, $\cos ax b e^{x+}$, $(ax+b)^n \sin x$, $(ax+b)^n \cos x$, concavity and inflection points, envelopes, asymptotes, curve tracing in Cartesian coordinates, tracing in polar coordinates of standard curves, L'Hospital's rule, applications in business, economics and life sciences</p> <p>Unit-2 : Reduction formulae, derivations and illustrations of reduction formulae for the integration of $\sin nx$, $\cos nx$, $\tan nx$, $\sec nx$, $(\log x)^n$, $\sin x \cos nx$, parametric equations, parametrizing a curve, arc length, arc length of parametric curves, area of surface of revolution. Techniques of sketching conics.</p> <p>Unit -3: Reflection properties of conics, translation and rotation of axes and second degree equations, classification of conics using the discriminant, polar equations of conics. Spheres. Cylindrical surfaces. Central conicoids, paraboloids, plane sections of conicoids, Generating lines, classification of quadrics, Illustrations of</p>	Sanjukta Das	60	<p>Lecture</p> <p>Tutorial</p> <p>Assignment: 01</p> <p>Class test- 01</p> <p>PPT-01</p>

		<p>graphing standard quadric surfaces like cone, ellipsoid.</p> <p>Unit – 4: Differential equations and mathematical models.</p> <p>General, particular, explicit, implicit and singular solutions of a differential equation. Exact differential equations and integrating factors, separable equations and equations reducible to this form, linear equation and Bernoulli equations, special integrating factors and transformations.</p>			
--	--	--	--	--	--

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH1CC02	Algebra	<p>Unit -1 :Polar representation of complex numbers, n-th roots of unity, De Moivre's theorem for rational indices and its applications.</p> <p>Theory of equations: Relation between roots and coefficients, Transformation of equation, Descartes rule of signs, Cubic and biquadratic equations, reciprocal equation, separation of the roots of equations, Sturm's theorem</p> <p>Inequality: The inequality involving $AM \geq GM \geq HM$, Cauchy-Schwartz inequality</p> <p>Unit -2 :Equivalence relations and partitions, Functions, Composition of functions, Invertible functions, One to one correspondence and cardinality of a set. Well-ordering property of positive integers, Division algorithm, Divisibility and Euclidean algorithm. Congruence relation between integers. Principles of Mathematical Induction, statement of Fundamental Theorem of Arithmetic.</p> <p>Unit -3: Systems of linear equations, row reduction and echelon forms, vector equations, the matrix equation $Ax=b$, solution sets of linear systems, applications of linear systems, linear independence. Unit 4: Introduction to linear transformations, matrix of a linear transformation, inverse of a matrix, characterizations of invertible matrices.</p> <p>Vector spaces, Subspaces of R_n, dimension of subspaces of R_n, rank of a matrix, Eigen values, Eigen Vectors and Characteristic Equation of a matrix. Cayley-Hamilton theorem and its use in finding the inverse of a matrix</p>	Papia Ghosh	60	<p>Lecture, Tutorial, Class Test-01 PPT-02 Remedial Class-02</p>

1st. SEMESTER (GENERAL)

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMG1CC1A	Differential Calculus	1.LIMIT .CONTINUITY,SUCCESSIVE DIFFERENTIATION ,LEIBNITZ'S THEOREM,PARTIAL DIFFERENTIAL EQUATION,EULER'S THEOREM ON HOMOGENOUS FUNCTIONS 2.TANGENT, NORMAL, CURVATURE,ASYMPTOTES,SINGULAR POINTS TRACING OF CURVES AND PARAMETRISATION OF CURVES POLAR COORDINATES 3.ROLLE'S THEOREM,MEAN VALUE THEOREM,TAYLOR'S THEOREM,TAYLORS SERIES, MACLAURIN'S SERIES	Dr. Biswajit Paul	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01

3rd SEMESTER (HONOURS)

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH3CC05	Theory of Real Functions & Introduction to Metric Space	<p>Unit -1:Limits of functions ($\epsilon - \delta$ approach), sequential criterion for limits, divergence criteria. Limit theorems, one sided limits. Infinite limits and limits at infinity. Continuous functions, sequential criterion for continuity and discontinuity. Algebra of continuous functions. Continuous functions on an interval, intermediate value theorem, location of roots theorem, preservation of intervals theorem. Uniform continuity, non-uniform continuity criteria, theorems on uniform continuity.</p> <p>Unit -2 :Differentiability of a function at a point and in an interval, Caratheodory's theorem, algebra of differentiable functions. Relative extrema, interior extremum, Rolle's theorem. Mean value theorem, intermediate value property of derivatives, Darboux's theorem. Applications of mean value theorem to inequalities and approximation of polynomials, Application of differential calculus : Curvature</p> <p>Unit-3:Cauchy's mean value theorem. Taylor's theorem with Lagrange's form of remainder, Taylor's theorem with Cauchy's form of remainder, application of Taylor's theorem to convex functions, relative extrema. Taylor's series and Maclaurin's series expansions of exponential and trigonometric functions, $\ln(1 + x)$, $1/ax+b$ and $(1 +x)^n$. Application of Taylor's theorem to inequalities. Unit-4 :Metric spaces: Definition and examples. Open and closed balls, neighbourhood, open set, interior of a set. Limit point of a set, closed set, diameter of a set, subspaces, dense sets, separable spaces</p>	Papia Ghosh	60	Lecture, Tutorial, Class Test-01 PPT-02 Remedial Class-02

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH3CC06	Group Theory-I	<p>Unit-1 :Symmetries of a square, Dihedral groups, definition and examples of groups including permutation groups and quaternion groups (through matrices), elementary properties of groups..</p> <p>Unit-2:Subgroups and examples of subgroups, centralizer, normalizer, center of a group, product of two subgroups</p> <p>Unit-3 :Properties of cyclic groups, classification of subgroups of cyclic groups, Cycle notation for permutations, properties of permutations, even and odd permutations, alternating group, properties of cosets, Lagrange's theorem and consequences including Fermat's Little theorem</p> <p>Unit-4: External direct product of a finite number of groups, normal subgroups, factor groups, Cauchy's theorem for finite abelian groups. Unit-5: Group homomorphisms, properties of homomorphisms, Cayley's theorem, properties of isomorphisms, First, Second and Third isomorphism theorems</p>	Sanjukta Das	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH3CC07	Numerical Methods & Numerical Methods Lab	<p>Unit-1: Algorithms, Convergence, Errors: Relative, Absolute. Round off, Truncation.</p> <p>Unit-2 : Transcendental and Polynomial equations: Bisection method, Newton's method, Secant method, Regula-falsi method, fixed point iteration, Newton-Raphson method. Rate of convergence of these methods.</p> <p>Unit -3 : System of linear algebraic equations: Gaussian Elimination and Gauss Jordan methods. Gauss Jacobi method, Gauss Seidel method and their convergence analysis, LU Decomposition. Unit-4: Interpolation: Lagrange and Newton's methods, Error bounds, Finite difference operators. Gregory forward and backward difference interpolations. Numerical differentiation: Methods based on interpolations, methods based on finite differences.</p> <p>Unit – 5 : Numerical Integration: Newton Cotes formula, Trapezoidal rule, Simpson's 1/3rd rule, Simpsons 3/8th rule, Weddle's rule, Boole's rule. Midpoint rule, Composite Trapezoidal rule, Composite Simpson's 1/3rd rule, Gauss quadrature formula. The algebraic eigenvalue problem: Power method. Unit – 6: Ordinary Differential Equations: The method of successive approximations, Euler's method, the modified Euler method, Runge-Kutta methods of orders two and four.</p>	Dr. Biswajit Paul	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH3S EC11	Logic and Sets	<p>Unit 1 : Introduction, propositions, truth table, negation, conjunction and disjunction. Implications, biconditional propositions, converse, contra positive and inverse propositions and precedence of logical operators. Propositional equivalence: Logical equivalences. Predicates and quantifiers: Introduction, Quantifiers, Binding variables and Negations</p> <p>Unit 2 : Sets, subsets, Set operations and the laws of set theory and Venn diagrams. Examples of finite and infinite sets. Finite sets and counting principle. Empty set, properties of empty set. Standard set operations. Classes of sets. Power set of a set.</p> <p>Unit 3 : Difference and Symmetric difference of two sets. Set identities, Generalized union and intersections. Relation: Product set. Composition of relations, Types of relations, Partitions, Equivalence Relations with example of congruence modulo relation. Partial ordering relations, n- ary relations.</p>	Dr. Biswajit Paul	40	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01

3rd SEMESTER (GENERAL)

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMG4CC1C	Algebra	FINITE AND INFINITE SETS,COUNTABLE AND UNCOUNTABLE SETS,REAL LINE,BOUNDED SETS, SUPREMA INFIMA,COMPLETENESS PROPERTY,ARCHIMEDEAN PROPERTY,INTERVALS,CLUSTER POINTS, BOLZANO WEIERSTRASS THEOREM REAL SEQUENCE, BOUNDED SEQUENCE,CAUCHY CONVERGENCE CRITERION FOR SEQUENCE, CAUCHY'S THEOREM ON LIMITS, MONOTONE SEQUENCE INFINITE SERIES,CAUCHY CONVERGENCE CRITERION FOR SERIES,GEOMETRIC SERIES,COMPARISON TEST,ROOT TEST,RATIO TEST,ALTERNATING TEST, LEIBNITZ'S TEST,ABSOLUTE AND CONDITIONAL CONVERGENCE SEQUENCE AND SERIES OF FUNCTIONS,POINTWISE AND UNIFORM CONVERGENCE,M _n TEST,M TEST,POWER SERIES RADIUS OF CONVERGENCE	Dr. Biswajit Paul	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01

5th SEMESTER (HONOURS)

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH5CC11	Partial Differential Equations and Applications	<p>Unit 1: Partial Differential Equations – Basic concepts and Definitions. Mathematical Problems. First- Order Equations: Classification, Construction and Geometrical Interpretation. Method of Characteristics for obtaining General Solution of Quasi Linear Equations. Canonical Forms of First-order Linear Equations. Method of Separation of Variables for solving first order partial differential equations.</p> <p>Unit 2: Derivation of Heat equation, Wave equation and Laplace equation. Classification of second order linear equations as hyperbolic, parabolic, elliptic. Reduction of second order Linear Equations to canonical forms.</p> <p>Unit 3: The Cauchy problem of 2nd order partial differential equation, Cauchy-Kowalewskaya theorem, Cauchy problem of an infinite string, Initial and Boundary Value Problems. Semi-Infinite String with a fixed end, SemiInfinite String with a Free end. Equations with non-homogeneous boundary conditions. Non-Homogeneous Wave Equation. Method of separation of variables: Solving the Vibrating String Problem. Solving the Heat Conduction problem</p>	Papia Ghosh	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH5CC12	Mechanics I	<p>Unit 1 : Co-planar forces. Astatic equilibrium. Friction. Equilibrium of a particle on a rough curve. Virtual work. Forces in three dimensions. General conditions of equilibrium. Centre of gravity for different bodies. Stable and unstable equilibrium, equilibrium of flexible string</p> <p>Unit 2 : Simple harmonic motion, Damped and forced vibrations, Components of velocity and acceleration, Equations of motion referred to a set of rotating axes. Motion of a projectile in a resisting medium. Motion of a particle under central force, Kepler's laws of motion, Motion under the inverse square law, Stability of nearly circular orbits, Slightly disturbed orbits, Motion of artificial satellites. Varying mass, constrained, Motion of a particle in three dimensions. Motion on a smooth sphere, cone, and on any surface of revolution</p> <p>Unit 3 : Degrees of freedom, Moments and products of inertia, Momental Ellipsoid, Principal axes, D'Alembert's Principle, Motion about a fixed axis, Compound pendulum, Motion of a system of particles, Motion of a rigid body in two dimensions under finite and impulsive forces, Conservation of momentum and energy</p>	Dr. Biswajit Paul	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH5DSE11	Linear Programming	Unit 1 : Introduction to linear programming problem. Theory of simplex method, graphical solution, convex sets, optimality and unboundedness, the simplex algorithm, simplex method in tableau format, introduction to artificial variables, two-phase method. Big-M method and their comparison Unit 2 : Duality, formulation of the dual problem, primal-dual relationships, economic interpretation of the dual, Dual Simplex method. Unit 3 : Transportation problem and its mathematical formulation, northwest-corner method, least cost method and Vogel approximation method for determination of starting basic solution, algorithm for solving transportation problem, assignment problem and its mathematical formulation, Hungarian method for solving assignment problem, Travelling salesman problem Unit 4 : Game theory: Formulation of two person zero sum games, solving two person zero sum games, games with mixed strategies, graphical solution procedure, linear programming solution of games.	Dr. Biswajit Paul	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01
BMH5DSE21	Probability and Statistics	Unit 1 : Sample space, probability axioms, real random variables (discrete and continuous), cumulative distribution function, probability mass/density functions, mathematical expectation, moments, moment generating function, characteristic function, discrete distributions: uniform, binomial, Poisson, geometric, negative binomial, continuous distributions: uniform, normal, exponential Unit 2 : Joint cumulative distribution function and its properties, joint probability density functions, marginal and conditional distributions, expectation	Sanjukta Das	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01

		of function of two random variables, conditional expectations, independent random variables, bivariate normal distribution, correlation coefficient, joint moment generating function (jmgf) and calculation of covariance (from jmgf), linear regression for two variables Unit 3 : Chebyshev's inequality, statement and interpretation of (weak) law of large numbers and strong law of large numbers. Central Limit theorem for independent and identically distributed random variables with finite variance, Markov Chains, Chapman-Kolmogorov equations, classification of states

4th SEMESTER (HONOURS)

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH4C C08	Riemann Integration and Series of Functions	<p>Unit -1 :</p> <ol style="list-style-type: none"> 1. Riemann integration: inequalities of upper and lower sums 2. Darboux integration, Darboux theorem, Riemann conditions of integrability 3. Riemann sum and definition of Riemann integral through Riemann sums, the equivalence of two Definitions. 4. Riemann integrability of monotone and continuous functions 5. Properties of the Riemann integral; definition and integrability of piecewise continuous and monotone functions. 6. Intermediate Value theorem for Integrals 7. Fundamental theorem of Integral Calculus <p>Unit-2 :</p> <ol style="list-style-type: none"> 1. Improper integrals 2. Convergence of Beta and Gamma functions. <p>Unit-3 :</p> <ol style="list-style-type: none"> 1. Pointwise and uniform convergence of sequence of functions. 2. Theorems on continuity, derivability and integrability of the limit function of a sequence of functions. 3. Series of functions, Theorems on the continuity and derivability of the sum function of a series of functions 4. Cauchy criterion for uniform convergence and Weierstrass M-Test. <p>Unit 4:</p> <ol style="list-style-type: none"> 1. Fourier series: Definition of Fourier coefficients and series 2. Riemann- Lebesgue lemma, Bessel's inequality, Parseval's identity, Dirichlet's condition. 	Dr. Biswajit Paul	60	Lecture, Tutorial, Class Test-01 PPT-02 Remedial Class-02

Examples of Fourier expansions and summation results for series.

Unit 5:

1. Power series, radius of convergence, Cauchy Hadamard Theorem.
2. Differentiation and integration of power series; Abel's Theorem; Weierstrass Approximation Theorem.

COURSE CODE	COURSE NAME	SUBJECT TOPICS	TEACHER'S NAME	NO. OF CLASSES	Curriculum Delivery
BMH4C09	Multivariate Calculus	<p>Unit -1 :</p> <ol style="list-style-type: none"> 1. Functions of several variables, limit and continuity of functions of n variables 2. Partial differentiation, total differentiability and differentiability, sufficient condition for differentiability. 3. Chain rule for one and two independent parameters 4. Directional derivatives, the gradient, Jacobian, maximal and normal property of gradient, tangent planes 5. Extrema of functions of n variables with necessary and sufficient conditions 6. Method of Lagrange multipliers. <p>Unit-2 :</p> <ol style="list-style-type: none"> 1. Double integration over rectangular region, double integration over non-rectangular region 2. Double integrals in polar coordinates, Triple integrals 3. Triple integral over a parallelepiped and solid regions. 4. Volume by triple integrals, cylindrical and spherical coordinates. 5. Change of variables in double integrals and triple integrals. <p>Unit-3 :</p> <ol style="list-style-type: none"> 1. Vector operators, Gradient of a scalar function, directional derivatives 2. Definition of vector field, divergence and curl. 3. Line integrals, Fundamental theorem for line integrals, conservative vector fields 4. Application of line integral to Workdone. <p>Unit 4:</p> <ol style="list-style-type: none"> 1. Green's theorem, surface 	Papia Ghosh	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01

integrals, integrals over
parametrically defined
surfaces.

2. Stoke's theorem
3. The Divergence theorem.

Limitations of Newton's laws in solving problems. <p>Unit 2 :</p> <ol style="list-style-type: none"> 1. Equilibrium of fluid in a given field of force 2. Pressure in a heavy homogeneous liquid 3. Equilibrium of floating bodies 4. Isothermal and adiabatic changes in Gases 5. Convective equilibrium 6. Stress in continuum body 7. Stress quadric. <p>Unit 3 :</p> <ol style="list-style-type: none"> 1. Constraints and their classifications 2. Lagrange's equation of motion for holonomic system 3. Gibbs-Appell's principle of least constraint 4. Work energy relation for constraint forces of shielding friction. 	Papia Ghosh	60	Lecture, Tutorial, Class Test-01 PPT-01 Remedial Class-01
